

# BIOINFORMATICS: Considerations and tools for biologists

Thursday 26 September 2024

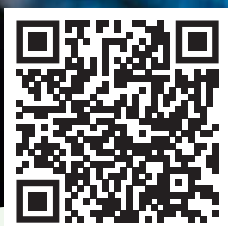

3.00pm - 4.00pm AEST

*Free to attend for all members of the medical research community*

Next-generation sequencing (NGS) generates massive amounts of data – a daunting prospect for biologists untrained in bioinformatics. However, when you have access to the right bioinformatics tools, you can analyse and aggregate this data, interpret it, and socialise the information quickly.

In this seminar, Dale will introduce key bioinformatics challenges and considerations relevant to biologists and highlight how tools from the Illumina Connected Software portfolio can help to address them.
